Claim Rejections - 35 USC § 112

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claims 1 and 2 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

In claim 1, the terminology "A" is a cationic substituent" fails to define what the substituent may be where the disclosure is clear it must be selected from the group recited in the claim as A'. The limitation where it may be selected from any cation is not considered supported in the disclosure.

Claim Rejections - 35 USC § 102

3. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
4. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Ito et al (6,090,732), for reasons of record.
5. Applicants' argument that Ito et al fail to teach a dielectric composition to be used in electronic components is not persuasive in overcoming the rejection. The claims are not drawn to electronic components. Furthermore, the dielectric properties are not quantified as to the dielectric constant, loss, etc. As to the cationic substituent "y" may

Art Unit: 1755

be "zero" and therefor the cationic substituent may not be present. Furthermore, it is not seen how "cation substituent" defines over the zinc of Ito et al who teach the zinc substituting the calcium. As to the sintering temperature, the claims are not drawn to the process of manufacture.

6. Claims 1 and 2 are rejected under 35 U.S.C. 102(a or e as being anticipated by Lee (6,514,891) for reasons of record.

7. Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by Lee et al (6,376,398), for reasons of record.

Again it is emphasized the instant claims do not require the presence of A" because y may be zero. As to the glass formers such as B_2O_3 , instant claim 2 includes this compound. Furthermore the claims use open terminology to include other components. Lee '891 (Table 1) does not require SiO_2 as Lee '398 (table 3).

Conclusion

8. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any

Art Unit: 1755

extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
